## DETAILED ACTION

### *Specification*

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

2. The abstract of the disclosure is objected to because it is not the concise description of the invention. Correction is required. See MPEP § 608.01(b).

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ngan et al (5,759,360) in view of Lee et al (5,705,432).

As to claim 5, Ngan et al disclose a process for removing a layer of native silicon oxide using an ion bombardment method using an inert gas plasma, wherein the ions of the inert gas strike the surface of the wafer and sputter remove or etch the native silicon oxide (col.2, lines 51-56).

Ngan et al fail to teach that the native silicon oxide is a reaction product of silicon materials and oxygen plasma.

However, in a method of semiconductor processing, Lee et al teach that a native silicon oxide is formed on the surface of a silicon substrate, wherein the native oxide is formed on the silicon surface by exposing the surface to an oxygen plasma (col.3, lines 64-col.4, line2).

Therefore, it would have been obvious that Ngan et al's native oxide is formed between the reactions of silicon materials with oxygen plasma because the native oxide is nothing but a reaction product of silicon materials and oxygen plasma as taught by Lee et al.

As to claim 6, Ngan et al teach that the inert gas plasma includes argon gas plasma (col.2, lines 52-56).

### ***Conclusion***

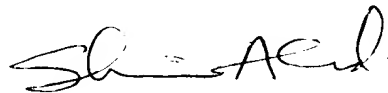

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Salimian et al (5,587,039) disclose a process for removing silicon oxide using inert gas plasma such as argon;
